Research methodology

20/8/2020

objectives

- Rise the awareness of people against these threats.
- Study and specify modern types of scams.
- Providing solution and guidance for people who got in different ways

methodology

we will be using several different methods of data collection and data analysis. These methods include:

- Interviews: interviews provide a real-world experience with anyone who's either a victim or a normal person. Live interviews provides sound and honest information which makes interviews the most effective way of collecting information
- surveys (online or physical surveys): online surveys are more effective than physical surveys due to their flexibility, we can create a website or a google sheet for collecting big amounts of data which also makes data-analysis a lot easier because you receive data in an ordered way
- Observation: with our professional team of licensed hackers and network observers, we can communicate with the scammers and fake our IDs for the purpose of hacking into their systems and exposing their activities to international cyber police.
- documents and records
- Case Studies

introduction

Scamming is one of the most popular ways that cyber criminals use to steal money from average people, in the US, one in ten adults will fall ~~into~~ victim to a scam or fraud every year. According to the Federal Trade Commission this number jumped by 34% in 2018, and the majority of these scams take place online. A study by Better Business Bureau, Finra, and the Stanford Center for Longevity revealed that around 53% of people scammers approach will engage, while other 47% immediately will become suspicious and ignore the approach. Due to these facts, we decided to conduct a research.

Significance

This topic is important because as we speak, there are people getting damaged by all different types of scams that are intelligently done by professional scamming groups. This research will make you familiar and give you enough information about identifying scams and dealing with them. After reading this research, you will be able to surf the great internet

freely and safely. people really need these types of information because nowadays, there is literally no one not using internet and due to the fast growth of technology, everything is becoming internet-based systems.

Research timetable

Research phase	objective	deadline
collecting information on scamming methods	<ul style="list-style-type: none"> • what is scamming? • how do they work? 	25/8/2020
collecting information on scammers and their organization	<ul style="list-style-type: none"> • where are they mostly located? 	30/8/2020
finding scamming victims and collecting information	<ul style="list-style-type: none"> • how did they face it? • how bad was the damage? • how did they get tricked? 	6/9/2020
spreading surveys and interviewing people	<ul style="list-style-type: none"> • how was their experience? • what do they recommend 	12/9/2020
Analysing our collected data	<ul style="list-style-type: none"> • know what we are dealing with 	15/9/2020
Publishing our Results	Rising People's awareness	20/9/2020

Budget and Resources

- internet connection
- office
- Access to federal security database
- Encrypted communication devices

Dissemination

This Research is aimed towards everyone who is by any chance using internet. if you are working in an office, sitting at home and watching netflix, playing on your console, having trouble opening a website on the internet or just surfing on social media, there is a big chance for you to face scammers ~~and~~ and fall for their traps.
